

Home Visiting Programs for Child Well-Being

Definition:

The CEBC defines Home Visiting Programs for Child Well-Being as any home visiting programs with a goal to improve child well-being, including physical health, development, and school readiness. Home visiting is a mechanism to provide direct support and coordination of services for families which involves direct services to the family in the home setting. While services can also be received elsewhere, the home is the primary service delivery setting. Programs vary, but components may include 1) education in effective parenting and childcare techniques; 2) education on child development, health, safety, and nutrition; 3) assistance in gaining access to social support networks; and 4) assistance in obtaining education, employment, and access to community services.

Topic Area Criteria:

- **Target population:** Parents and their children; services can begin prior to birth while the mother is pregnant
- **Services/types that fit:** Home-based services with an individual or family focus that include assessment, case planning, case management, education, and/or skill building
- **Delivered by:** Child welfare staff, nurse, or trained paraprofessional
- **In order to be included in this topic area on the CEBC:** Home visiting program must specifically target child well-being as a goal
- **In order to be rated in this topic area by the CEBC:** There must be research evidence (as specified by the [Scientific Rating Scale](#)) that examines outcomes directly related to child well-being such as school records, immunization record, or standardized educational, mental health, or developmental measures

Programs

The table below provides a summary of the rated programs currently listed in the **Home Visiting Programs for Child Well-Being** topic area. More detailed information can be found on the [CEBC website](#).
